• Perfect for storage of supplies, tools, bins, equipment, gear, products, canisters, boxed, etc.

Shelves are box formed at front and back allowing high capacity storage with minimal deflection. Sides of shelves are triple flanged adding to shelf strength. Compression shelf clips improve overall unit capacity. Posts are punched to allow shelves to be adjusted top to bottom at 1-1/2" on center. Beaded front posts allow use of full shelf width and are common between adjoining units reducing assembly and installation time as well as reducing cost. Angle back posts can be bolted together when joining units side-by-side or back-to-back. Side and back sway braces eliminate unit sway providing a safe storage solution. Color: Dark Gray (HG). FOB Shipping Point.

Starter Units Include: Two front beaded posts, two angle back posts, one pair of back sway braces, two pair of side sway braces and shelves with shelf clips applicable to unit ordered.

Adder Units Include: One front beaded post, two angle back posts, one pair of back sway braces, one pair of side sway braces and shelves with shelf clips applicable to unit ordered.

HOW TO ORDER

BEAM LENGTH: SHELF LENGTH EQUALS THE DISTANCE BETWEEN UPRIGHTS. IT IS DETERMINED BY ADDING THE WIDTHS OF PALLET LOADS PLUS A 5" SIDE CLEARANCE BETWEEN UPRIGHT AND PALLET AND 6" BETWEEN PALLET LOADS. SHELF BEAM CAPACITIES ARE BASED ON A PAIR OF BEAMS SUPPORTING AN EVENLY DISTRIBUTED LOAD.

RACK HEIGHT: ADD THE FOLLOWING FIGURES:

HEIGHT OF PALLET LOADS (INCLUDING PALLET)
+ HEIGHT OF SHELF BEAM
+ 4" MINIMUM VERTICAL CLEARANCE FOR EACH PALLET LOAD
SUM OF ABOVE DIMENSIONS = RACK HEIGHT

FOR UPPERMOST LOAD LEVEL, LOCATION OF SHELF BEAM SHOULD BE 6" LESS THAN FORK TRUCK'S MAXIMUM LIFT HEIGHT. TOP OF BEAMS NEED TO BE AT 2" INCREMENTS.

D) Heavy-Duty Dual Wheel Casters

- **"NEW" Easy Turn & Roll.**
- **4", 5", & 6", in all wheel types.**

Dual casters make rolling and turning heavy loads easier than a single wheel. Double the floor contact and when turning a corner, one wheel rotates forward, while the other rotates backward (different action) making this the preferred mode for manual operations with loads from 500 to 4000 lbs. Standard top plate measures 3¾" x 4⅜", bolt hole is 2⅜" x 3⅜", slotted 3" x 3". Larger C top plate measures 4½" x 6¼", bolt holes 2 7/16" x 4 13/16", slotted 3⅜ x 5¼. For C top plate add -C. Aerosolv® Aerosol Can Disposal System

28225
Aerosolv® Counter makes it easy to count and record the number of aerosol cans punctured.

- **Provides a solution to the expense of solid waste disposal of aerosol cans.**
- **Complies with EPA regulations 40CFR261.23(a)(6).**

The Aerosolv® system safely converts spent aerosol cans from solid hazardous waste to a non-hazardous material. It accepts industry standard sized cans with a maximum height of 8½" (215-mm) and threads directly into a standard 2" (51-mm) bung on a 30 (110-liter) or 55-gallon (200-liter) drum. Body is made of low maintenance aluminum and all moving parts are 308 stainless steel. A non-sparking pin punctures the can and the residual liquids flow into the collection drum. One 55-gallon (200-liter) drum holds approximately 4,200 spent aerosol cans. Attach the two-part combination filter to the ¾" (19-mm) bung to filter VOCs from any residual propellants. The bottom coalescing cartridge transforms residual liquids into droplets that collect in the reservoir of the cartridge and safely drain into the drum. The top activated carbon filter cartridge indicates saturation and serves as a replacement reminder. Economical, non color-changing filter is also available. System includes a combination filter, safety goggles, and an anti-static ground wire with alligator clip. EPA compliant. FOB Shipping Point.

Sign Muscle® preserves the life of your signs and labels! Our NEW & improved Sign Muscle® formulation is powerful enough to survive in most environments…and it's patented. Pioneered more than a decade ago, our scientifically strong liquid laminate protects your identification product from virtually any hazard. Durable, strong and resilient, Sign Muscle® delivers protection - guaranteed. A sign that lasts starts with a quality base material. For example, an industry tested material like plastic versus a typical competitor material with unknown orgins. The wrong base material can speed up damage to the potential life-saving safety message that sits on top. A message that guides a workforce to safety is a message that we can't allow to fade. Longevity through quality also means scientifically engineered ink-sets specifically created for the materials they will be printed on. That's the difference, driven by facts and supported by science. Resist fading and easily restore like new!

BEST SELLER

- **Increase productivity in the shipping department or at the end of a production line.**
- **Complete with a powered turntable and counter-balanced stretch film mast.**

Easy to operate -- simply depress the foot pedal and manually move the mast up and down. The film-wrap tension is controlled with an adjustable, friction-brake assembly. Film placement is controlled manually by moving the carriage assembly up and down on the vertical mast. An easy-to-release, hand operated carriage-brake allows the carriage to move freely making film application fast and simple. The system will accept 10" to 20" material. The unit ships with mast disconnected-simply raise mast and clamp into place. FOB Shipping Point.

The standard manual film wrap delivery can be upgraded to 115V 1-phase AC powered mast option (PMO). The hand held control is used to raise/lower the film while the foot control is used to operate the turntable. Optional Approach Ramp allows the operator to load and unload the machine with a pallet truck.

Counter Balanced Floor Cranes

BEST SELLER

- **Hand pump or 12V DC powered.**
- **Welded steel construction.**
- **Counterbalance included.**

This crane has an adjustable boom to allow for maximum adjustments and versatility to lift a variety of loads. The boom is raised with a manual hydraulic hand pump or a push of a bottom on DC powered units. The boom also telescopes out for a greater reach. The counterbalance design eliminates the need for front legs, making the unit easier to maneuver and ideal for reaching tight, hard to reach areas. Units roll on two (2) rigid 8" x 2" glass-filled nylon and two (2) swivel 8" x 3" phenolic casters with side brake. FOB Shipping Point.

LIFT MAGNET GUIDELINES:

Surface Condition: Magnet face and load surface must be clean and smooth. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. Paint, coatings, scale or other materials between the load surface and the magnet will adversely affect the holding power of the magnet.

Material Thickness: Lifting capacity is lower on thinner materials. Contact dealer for more capacity information.

Material Composition: Magnet capacity is based on lifting low carbon steel. Other materials may reduce lifting capacity.

Load Size and Position: Thin sheets, rough and irregular surfaces, odd shapes and scale all affect holding power adversely and must be considered in establishing a safety factor. The magnet must be positioned on the load center of gravity. Tilted or unbalanced loads significantly affect the holding power of the magnet.

Capacity: Maximum attractive force is approximately twice the rated lifting capacity. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. The above factors should be taken into account when determining appropriated safety factors for a given load. A minimum of 3 to 1 safety factor must be applied based on the actual breakaway force for a given load. **Refer to ASME Standard B30.20 for inspection and operating procedures of Close Proximity Operated Lifting Magnets and read Manufacturers' Operating Manual before using magnet.**

- **Hands free activation.**
- **Great for use where operator access is limited.**

Lifting WEBBING SLINGS

- **Premium edge sling at a standard edge sling cost.**
- **These strong webbing slings ensure worry-free lifting of heavy loads. Polyester standard. Nylon available - call for pricing.**
- **Extremely strong and wear-resistant, yet soft enough to handle even delicate surfaces.**

PRO EDGE® Tougher. Stronger. Better.®

Pro-Edge® is 50% tougher than standard webbing. The edges are made with high tenacity twisted tire-cord yarns. It is a scientific fact that twisted yarns are more resistant to cutting and abrasion than untwisted yarns. Since these twists are part of the yarn construction, the cut and abrasion resistance properties of the yarn will not go away after standard wear. Pro-Edge® maintains its strength far longer than most other webbings. Polyester standard. Nylon available -- call for pricing. All slings are measured end to end including eyes and/or hardware. FOB Shipping Point.

Rail Boards

Bluff Rail Boards are a way to bridge the gap between a dock and railcar for safe loading and unloading of shipments. They are custom designed to meet the unique specifications of each dock site, and can work successfully with any type of railcar. Lifting loops and locking rings make the Rail Board easy to place and secure before driving across it with a forklift. Available capacities range from 15,000-90,000 lbs. All-welded steel construction. Worksheet required to design - - call for pricing. FOB Shipping Point.

Edge of Dock Levelers

Bluff's Edge of Dock Leveler provides an easy way to correct the height difference between a dock and trailer bed. With a working range of 5" above and 5" below dock, it accommodates most loading applications. The leveler is positioned by lifting and pulling the handle to the dock floor, and then the latch assembly activates the lip, projecting it forward onto the bed of the trailer as the handle is lifted. When released, the handle automatically returns to its stored position. Conforms to ANSI MH30.1 Standards. FOB Shipping Point.

Edge of Dock Leveler Features

- **Capacities from 20,000 to 30,000 lbs.**
- **Available widths of 66", 72", and 78".**
- **Self-Storing handle.**
- **Bumper and bumper blocks included.**
- **Optional add-ons include: anchor kit, approach plate, longer lip for refrigerated trucks, steel faced bumpers and hydraulic package.**

Loading Dock Arms & Lights

The DL2 Series is a family of loading dock arms and lights reimagined and designed to be the future of dock lighting. The entire offering includes additional arm lengths to accommodate a broader range of applications, optimized arm and light head design, and the introduction of integrated LED technology into dock arms.

The **patented curved arm design** fits around door tracks without the need for additional joints or tubing, and the rectangular design significantly increases the strength and weight capacity compared to traditional dock arms. The DL2 Series arms also include a **bump-stop feature** that prevents the arms from obstructing doors. All dock arms and light heads are equipped with **a safety bumper** to protect operators from injury and mitigate damage to the product. The DL2 Series also utilizes **universal brackets**, making it very easy to install or retrofit existing dock lights without the need to drill new holes or install new mounting studs.

Safety Bumper

DL2 Integrated LED Loading Dock Arms

The DL2 Series features the introduction of integrated LED technology into dock arms. This patented technology eliminates the need for light heads, making the lights lighter, safer and easier to use, with less glare on operators while providing the same light levels as those with heads. The DL2 Integrated LED Loading Dock Arms use a patented curved arm design, rectangular tubing, and bump stop feature, making them a stronger, modernized, and streamlined alterative to traditional arm designs.

Lateral Files

HLPL3672L60

Heavy gauge welded steel construction ensures rigidity and durability for many years of use. Files will accommodate letter or legal hanging files. A mechanical interlock system prevents more than one drawer from opening at a time to eliminate the danger of tipping. Drawers and shelves glide on heavy duty, full extension ball bearing suspensions. A single lock controls all openings. Locks are core removable and master keyed (order keys separately). Each opening is equipped with side-to-side hang rods for the folders. Optional front-to-back rods (H15CR) are available.

Drawers and doors have easy grip, full-width pulls with recessed label holders. Four leveling glides allow the unit to be leveled on uneven floors. To reduce risk of tipping, order two drawer lateral files with counterweights (suffix "W") for all applications except under a work surface in a workstation. Five and six-high units have retractable door(s) with roll-out drawer on top opening(s). Choose an optional laminate top to create a work surface on two and three-high files. Specify Oak or Walnut. Durable powder-coat paint finish available in five colors. FOB Shipping Point.

The Safety Step is designed for comfort. When accending and descending the ladder, the staircase design helps you feel as if you are walking up and down a set of stairs. The non-slip steps prevent you from losing your balance. The staircase steps are perfect for when you need a temporary staircase like while framing a house or while welding stairs. It is available in 2, 3 and 4-step models. It is a Type IA stepladder, rated for 300 lbs. and meets or exceeds all OSHA and ANSI standards. FOB Shipping Point.
